

Training Daily Diary – Day 1

Topic Covered Today:

- Introduction to HTML (HyperText Markup Language)
- Understanding the purpose and use of HTML
- Basic structure of an HTML document
- Introduction to HTML tags and elements
- Creating headings and paragraphs
- Creating and running a basic HTML webpage

Key Learning:

Today I learned about HTML, which is the standard markup language used to create and structure web pages.

- HTML stands for HyperText Markup Language. It is used to define the structure and content of a webpage.
- HTML is not a programming language. It is a markup language that uses tags and elements to organise content on a webpage.
- I learned that an HTML document generally contains `<!DOCTYPE html>`, `<html>`, `<head>`, `<title>`, and `<body>` sections.
- `<!DOCTYPE html>` is used to declare that the document is an HTML5 document.
- The `<head>` section contains information about the webpage, while the `<body>` section contains the content that is displayed in the browser.

I also learned about commonly used HTML tags:

- `<h1>` to `<h6>` → used for headings
- `<p>` → used to create paragraphs
- `<br>` → used to insert a line break
- `<hr>` → used to create a horizontal line
- `<a>` → used to create links
- `<img>` → used to display images

I practised writing HTML tags and understood the difference between opening and closing tags.

Activities / Assignments:

- ✓ Created a basic HTML file.
- ✓ Practised the basic HTML document structure.
- ✓ Created different headings using `<h1>` to `<h6>`.

- ✓ Added paragraphs using the `<p>` tag.
- ✓ Practised using basic HTML tags.
- ✓ Opened the HTML file in a web browser to view the webpage.
- ✓ Observed how HTML tags affect the structure and display of webpage content.

Personal Reflection for Day 1:

Today's session was my introduction to HTML and web development. I learned how a basic webpage is created and understood the importance of HTML in building the structure of websites.

At first, the different HTML tags and document structure were new to me, but after practising them, I started understanding how each tag is used for a specific purpose.

This session gave me a strong foundation for learning CSS, Bootstrap, JavaScript, and other technologies used in web development. I am looking forward to learning more HTML elements and creating more structured webpages in the upcoming sessions.
