

Training Daily Diary – Day 3

Topic Covered Today:

- Introduction to HTML Forms
- Understanding the purpose of forms in web pages
- Creating form elements using HTML
- Using text fields, email fields and password fields
- Using radio buttons and checkboxes
- Using dropdown lists and submit buttons
- Creating a basic student registration form

Key Learning:

Today I learned about **HTML Forms**, which are used to collect information and input from users on a webpage.

- The `<form>` tag is used to create an HTML form.
- The `<input>` tag is used to create different types of input fields.
- The `type` attribute defines the type of input field, such as text, email, password, radio, checkbox and submit.
- The `<label>` tag is used to provide a description for an input field.
- The `<select>` and `<option>` tags are used to create a dropdown list.
- The `<textarea>` tag is used to create a multi-line text input area.

I practised using different form elements to collect information such as name, email, password, gender and course.

Example:

```
<form>
  <label>Name:</label>
  <input type="text">

  <label>Email:</label>
  <input type="email">

  <label>Password:</label>
  <input type="password">

  <input type="submit" value="Submit">
</form>
```

I also learned that forms are commonly used in websites for registration, login, contact forms, feedback, search, and collecting user information.

Activities / Assignments:

- ✓ Created a basic HTML form.
- ✓ Added text input fields for user information.
- ✓ Added an email input field.
- ✓ Added a password input field.
- ✓ Practised using radio buttons and checkboxes.
- ✓ Created a dropdown list using `<select>` and `<option>`.
- ✓ Added a submit button to the form.
- ✓ Created a basic student registration form containing name, email, gender, course and other details.
- ✓ Tested the form in a web browser to understand how different form elements work.

Application Form

First Name: Last Name:

Date of Birth: age:

Gender: Email Address:

Position Available: ☒ Junior Developer ☐ Mid-level Developer ☐ Senior Developer

Programming Languages : ☐ Java ☐ JavaScript ☐ Python

password:

Confirm password:

Personal Reflection for Day 3:

Today's session helped me understand how HTML forms are used to collect information from users.

I learned about different form elements and understood how each input type is used for a specific purpose. Creating a student registration form helped me understand how multiple form elements can be combined to create a complete webpage form.

This session was useful because forms are an important part of almost every website and web application. I will also be able to use these concepts later with CSS, JavaScript, React, and backend technologies to create interactive forms.
